A Presentation on Risk Management and How Crop Insurance Can Help You Manage Production and Price Risk

You **NEED** to hear what we have to say!!

AgriLogic, Inc., on behalf of USDA - Risk Management Agency, will present information on Risk and Risk Management with an emphasis on using crop insurance to manage production and price risk, **including the new Pasture, Rangeland & Forage insurance plans.**

Production agriculture is a risky business, but, by managing your risks they can be reduced to acceptable levels. They will not go away, but you can live with risk.

Producers, insurance industry personnel, and other interested parties will be given an inside look at risk factors that are important to producers, their families and future generations. Then, presenters familiar with production agriculture and mitigating risk will give practical and useful insight into the many ways risk can be managed through crop insurance, marketing, and other risk management strategies. Family farming operations involve all members of the management team, so please include all participants of the decision making in this valuable learning opportunity.

Seating will be limited, and lunch will be served. Please R.S.V.P. to attend so sufficient food will be available to all.

If you are unable to attend but would like more information, please contact Matt Stumm or visit the project's Web site at www.agrilogic.com/education.
